React: Whats the time

React – Class component

The following exercise contains the following subjects:

- Class component
- state

Instructions

Build a page that contains 3 text input fields:
one shows a few seconds, the other a few minutes, and the third a few hours.
Any change in value in one of the inputs should affect the values in the other boxes so that the time displayed in all 3 inputs will be adjusted.
For example, when a user writes 60 in the second box, 1 must be displayed in the minute box and 0.01666 in the hour box.
Mock-up example:
